

Grip Factory Munich

YOUR INNOVATIVE PARTNER FOR CAMERA SUPPORT

The GF-16 Crane supersedes the GF-14 and is the ultimate in “big” modular, rideable and remote crane systems.

A major highlight of the GF-16 is the adjustable mounting column. It allows assembly of the arm at a low, comfortable pivot height of 158cm / 5' 2". When assembled the complete arm can be elevated 40cm / 18" per hand crank or motor driven with a battery operated screwdriver. This feature not only improves safety and handling as it reduces the need for using ladders etc during assembly and breakdown, it also gives the operator more options to adapt the crane to the location or set. Transportation of the crane is more comfortable as the assembled base, column and pivot section is only 192cm / 6' 3" high when retracted.

The new adjustable column

Driven with a 24 volt screwdriver

40cm lift range with complete load

As with all GFM products, the GF-16 components are treated with a patented, surface hardening process (Hart Coat) resulting in a scratch proof and non-flake finish. This process increases the equipments durability and lifespan giving it that "new look" even after intensive use on set. Thrashed looking gear and touch up paint jobs are things of the past.

Features of the GF-16 Crane System are

- man ride with 2 persons to 8,95m / 19'4"
- man ride with 1 person to 11,3m / 37'
- remote operation with 80kg / 176lbs payload to 14,5m / 47'7"
- remote operation with 60kg / 132lbs payload to 15,3m / 50'2"

The maximum amount of counterweight required is 1394kg / 3066lbs

16.8m / 55ft reach
